# SYLKA™ Marine

The perfect finishing touch  
for any luxury yacht

## Introduction to SYLKA™ Marine

Welcome to **SYLKA™ Marine** – one of the world's leading producers of luxury carpets and rugs for the maritime industry.

**SYLKA™** is made with the innovative, resilient **NuSilk™** fibre system making it ideal for a wide range of Marine applications.

Although delicate and luxurious to touch, the micro-fibre from which **NuSilk™** is derived from makes **SYLKA™** extremely durable and hardwearing making it exceptionally versatile.

Unlike all natural and faux silk luxury floor coverings, including viscose and bamboo, **NuSilk™** is the only fibre system of its type that will retain its beauty and delicate feel after cleaning.

Thanks to its ability to withstand spillages, sun damage and heavy foot traffic, **SYLKA™** has been specified by high-profile boat builders and marine interior designers for vessels from 20 metre to 100 metre superyachts.

It is ideal for new builds and refurbishment projects, making it the perfect marine choice for pure luxury and practicality.

## About SYLKA™

Founded in 2012, **SYLKA™** is the culmination of years of experience spent providing high-quality luxury carpets to some of the world's most discerning customers.

Having grown since then, it has become recognised as one of the world's leading producers of luxury carpets and rugs, based upon its unenviable reputation for producing beautiful, easy to clean and hard wearing collections.

Having won a number of awards since its launch, **SYLKA™** has become the product of choice for a number of boat builders and interior designers and is regularly specified on some of the top superyachts.

As we directly produce our carpets we can ensure that only the highest standards are met and ensure we are able to meet strict deadlines, often acting as the final contractors on-board yachts before final sign off at the end of a refit.

## Services

At SYLKA™ we provide a full service from beginning to end starting with the initial design consultation to final installation.

Once we have the colour and design brief we can then provide a full colour render. Once these have been approved we then produce full production trials in the fibre, texture, colour and design agreed for client approval. It typically takes seven to 10 days for colour renders and up to three weeks for a production trial.

## Installation

All of our Carpet Planners/Fitters are employed on a PAYE basis, which means we have total control over their work.

To ensure standards remain high, all of our installation teams serve at least six years training, which is done in-house by our parent company Borderline C.P.S. Ltd.

Our installers understand exactly what we expect from them to give our clients a top quality finish and work efficiently to ensure projects are completed on time and on budget.

To give our clients an idea of the costs involved we can initially work from architect drawing's to give an accurate estimate. If clients are happy with our quote we will then send a surveyor/estimator to site to carry out a full survey, to give a fixed cost for the project.

Once all costs are signed off, we will brief our highly-trained team and prepare the product for delivery in order to suit the needs of the client.

## Guarantees and Standards

All of our installations are guaranteed to be of the highest standard and our products have a two year guarantee against any manufacturing faults with a five year wear guarantee subject to conditions, which are available on request.

Whether you require a bespoke hand crafted or one of our other ranges the service we offer our clients will be of the same exacting standard.

All our carpets and rugs comply with the following ratings:

- They meet or exceed a commercial density rating of up to 1,000 foot traffics per day, making them suitable for heavy domestic or medium contract use.
- They meet or exceed the flammability standard US ASTM E648-08 Critical Radiant Flux and British Standard BS 4790:1987 (Method for determination of the effects of a small source of ignition on textile floor coverings (hot metal nut method)).
- For aircraft and superyacht installations requiring the Vertical Flammability Test (US Federal Aviation Regulation) FAR25.853a, we offer a Promethezyl flame-retardant finish.
- **SYLKA™** products are constructed to achieve low tog rating, making them ideally suited for installation involving underfloor heating.
- They are treated with **NuShield** performance additive for advanced protection against soiling, stains and static electricity.
- They are finished with **NuBac** natural rubber latex backing to promote improved tuft bind performance, ease of installation and handling and enhanced seaming.
